Adding a SharePoint Task List

The wizard for adding new Task lists utilizes the new **Connection Template** and **Credential mechanism** of FireStart, both of which are explained in their respective sections in this article.

To enable the task deployment to SharePoint, the FireStart Task content type has to be added:

- To **SharePoint on premise**, existing Task lists
- To **SharePoint online**, for existing lists that also have the SharePoint Task content type added.

For further information on deploying the FireStart Task content type to a SharePoint online system, visit [FireStart TaskList content type for SharePoint Online](#).

To search for applicable Task lists, fill out the form either by choosing an existing Connection Template or by entering values manually.

SharePoint Task Lists

Search for task lists containing the FireStart Content Type to deploy tasks to the SharePoint.

CHOOSE EXISTING CONNECTION TEMPLATE

CONNECTION TYPE

WEB URL

TASK LISTS

Selected	Task List	Web Url

This information is required:

- **Connection type**, being either *On-premises* or *Online*
 - Bear in mind that upon switching the Connection type, different credentials are necessary and displayed!
- **Credential**, providing an option to either choose an existing Credential or create a new Credential
- **Web Url**, being the absolute URL of a SharePoint site in which to search for Task lists

If all information is supplied, Task lists can be searched by clicking on the **Load Task Lists** button. In the section **SharePoint Task Lists**, all lists that fulfill the requirements will be displayed.

Load Task Lists

TASK LISTS

Selected	Task List	Web Url
<input checked="" type="checkbox"/>	FireStart TaskList	http://tst-sp2013
<input type="checkbox"/>	MyFireStartTasks	http://tst-sp2013
<input type="checkbox"/>	Tasks	http://tst-sp2013

Save

Cancel

If an entry is already checked, this means that FireStart already knows the Task list. Task lists can only be removed via the [Portal Management](#) section within the Client. To add a Task list to the FireStart system, simply check the desired entries. Click the **Save** button to confirm your selections. The new Task Lists will be available for assignment to specific Roles and Users.
