Notifications

Notifications (e.g a message from another FireStart user or a failed task) can be received via internal notifications in FireStart or via Mail. More notification plugins (e.g. MS Teams) will come in the future, so watch out for them.

Notification Types

A notification may have one to multiple types. The following types are currently implemented:

Activities

 Activities may send notifications eg. BESync, SMS/BingTranslate warn about missing credentials

Workflows

 Sent when the DynamicUser is set to an User which does not have a Email/LoginName but the value is written to a BusinessEntity Field

User sends notification directly from workflow. Start Task Add dataflow element Delete (Del) Attachments Clipboard Select participants Copy (Ctrl+C, Ctrl+Insert) Select documents Cut (Ctrl+X, Shift+Delete) Select domains Paste (Ctrl+V, Shift+Insert) Select risks Notification Select IT systems Send notification Actions View Modify Zoom in Rename (Ctrl + '+', F10) (F2) Link Zoom out (Ctrl + 1-1, F9) Add Link Zoom 100% (Ctrl 0, Ctrl *) Business entity Select business entity fields Edit event Catch: End

System

- Event Handling fails
- BEs cannot be cached

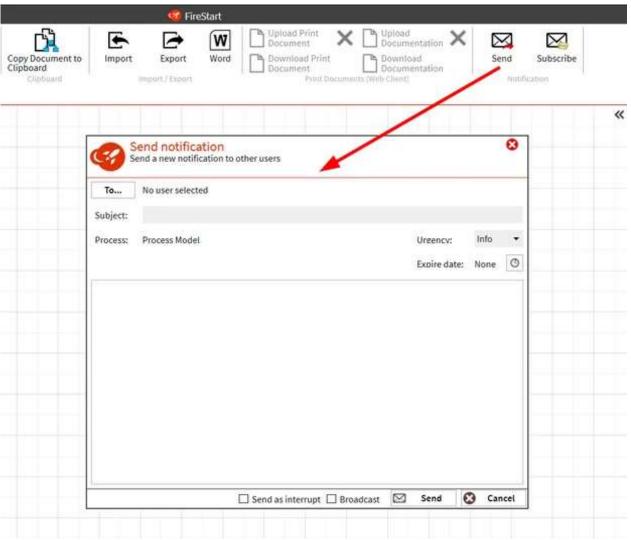

Tasks

- For User when a Task was Deployed
- For Owner when all Users have declined a Task

Processes

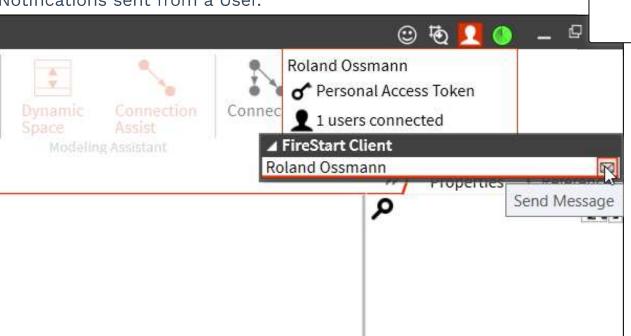

o Model changed (published, approved, deployed, changed,)

Users

Notifications sent from a User.

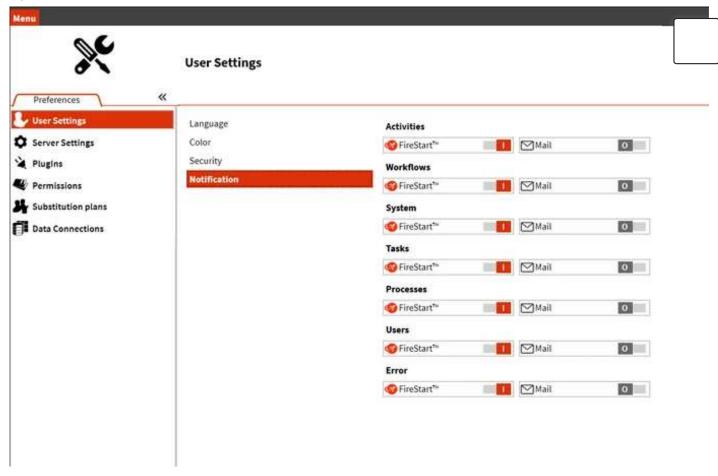

Failures

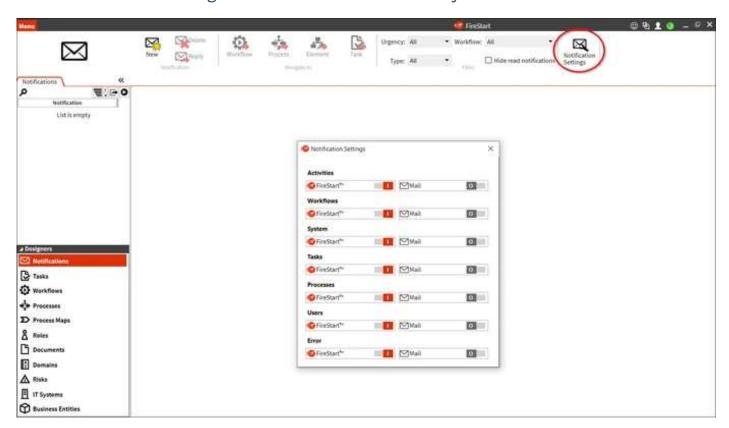

Failed Task added

Settings

In the settings page, users are able to customize which notifications they want to get and for which notification types they also want to get a mail.

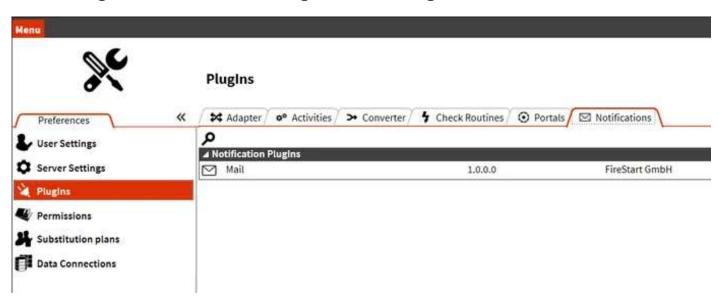

The notification settings are also reachable directly via the notification view.

Mail Plugin

In the Client Settings -> Plugins -> Notifications, you see the available notification plugins. The internal notification system is integrated in the FireStart server, and therefore, it is not listed here. The mail plugin using the mail configuration from the Config wizard setting.

Notification Mail

If users activate the mail delivery for a category, they will get the notification not only in FireStart but also via mail.

FireStart Task Notification

A task "Test" of workflow "Test" with medium priority was assigned to you.

Open in FireStart Portal

FireStart Outlook AddIn

If the user has the FireStart Outlook AddIn installed, they get the Process Politar notification view embedded in the Outlook preview pane when opening a FireStart notification mail. With the buttons on the lower right they can easily switch to the related workflow, process or task.
