# Set Link Usage

After a Business Entity mapping has been created, it shows a link usage. This can be 'Live', 'Test', or 'None'. This means, for one BE mapping, you can have, for example, a Live and a Test link usage pointing to a live and a test system, respectively.

### Business entity definition ✖

Here you can define the fields of this business entity which can be mapped with real data. Fields which are not mapped are workflow variables. Additionally, you can define views for complex data structures.

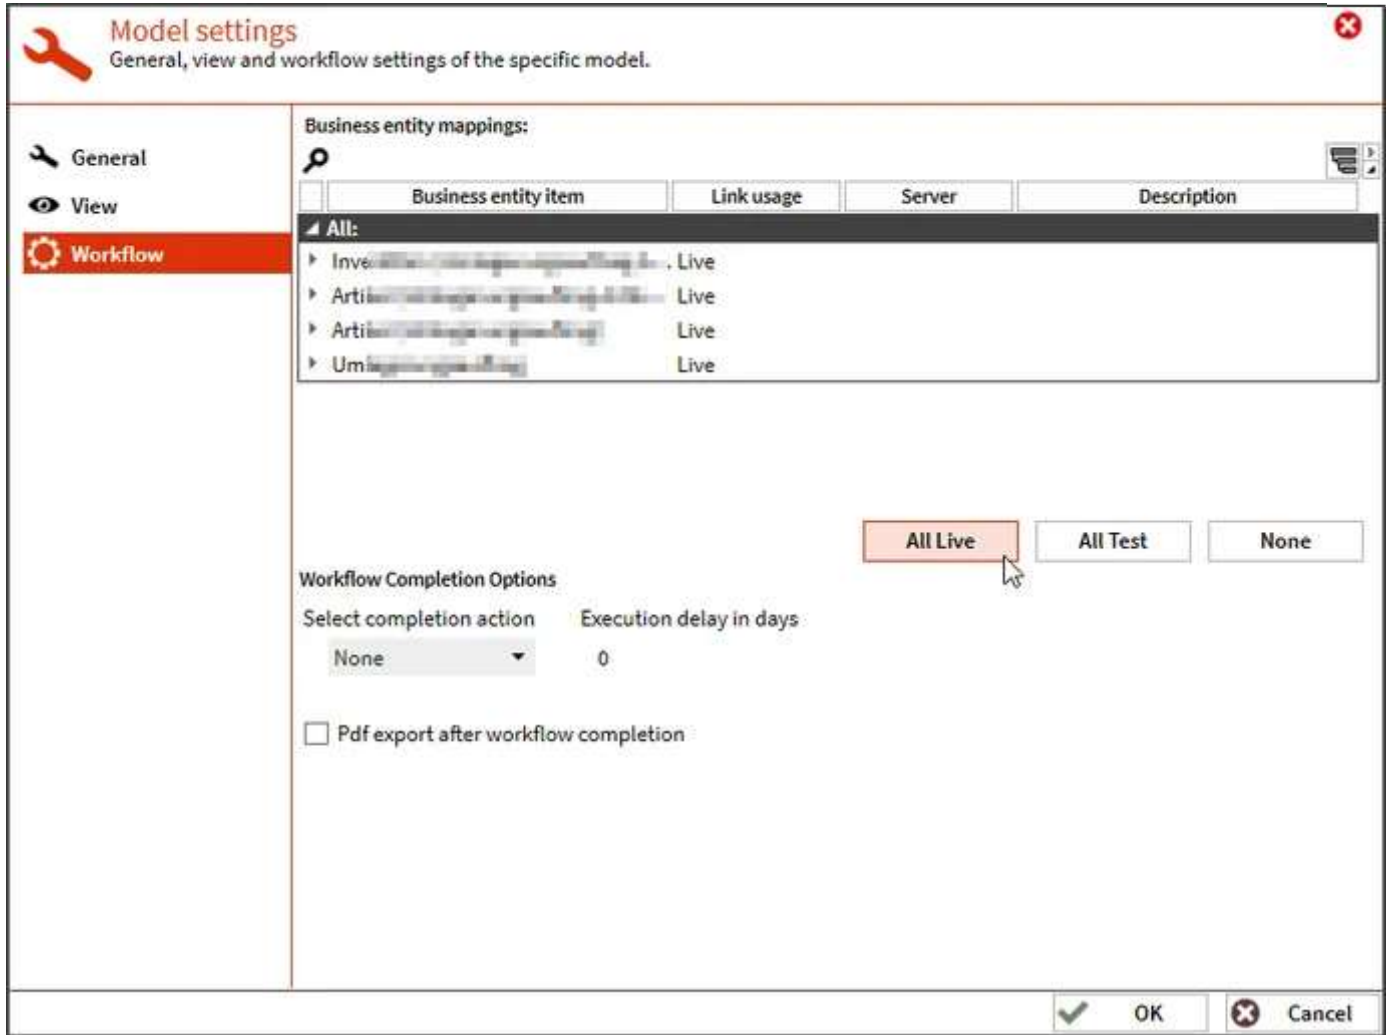

General / Fields **Mappings** Views

State	Server	List / Table	System type	Link usage
Type: SharePoint 2013/2016/Online				
Online	dev-ps2013	Web-URL: http://dev-ps2013/ List:...	SharePoint	Live

None  
Live  
Test

+ Add ✎ Edit ✖ Delete ↻ Reload ✓ OK ✕ Cancel

You can select the preferred link usage later in the model settings so you can easily switch between a test and a live system.
