Field Types in Table Form Controls

All FireStart Business Entity field types are supported in both the **Editable Tables** and the **Selection Tables**. Every column of the Table can be bound to a Business Entity field and be of one of these types, should be edited by type and/or can be sorted accordingly:

- Booleans
- Passwords
- Numbers
- Dated
- Times
- Attachment Fields
- Formulas

Text, Passwords and Booleans

Passwords can not be sorted due to security reasons. In editable tables, all three types can be edited inline without opening the full row editing popup form.

Id ▲	User Name ▲	Password ▲	Active ▲	
1	TestUser1	*****	<input type="checkbox"/>	
2	TestUser2	...	<input checked="" type="checkbox"/>	
3	TestUser3	*****	<input type="checkbox"/>	
4	TestUser4	*****	<input checked="" type="checkbox"/>	
5	TestUser5	*****	<input checked="" type="checkbox"/>	
6	TestUser6	*****	<input checked="" type="checkbox"/>	
7	TestUser7	*****	<input checked="" type="checkbox"/>	

Edit

Numbers

Numbers can be sorted by their internal value. They can be displayed in their localized version and can be entered in their localized form in editable tables (decimal point (English) vs. decimal comma (other languages)):

Number ▲	Number ▲
0.234	0,234
0.5	0,5
1	1
2	2
3	3
4	4
5	5

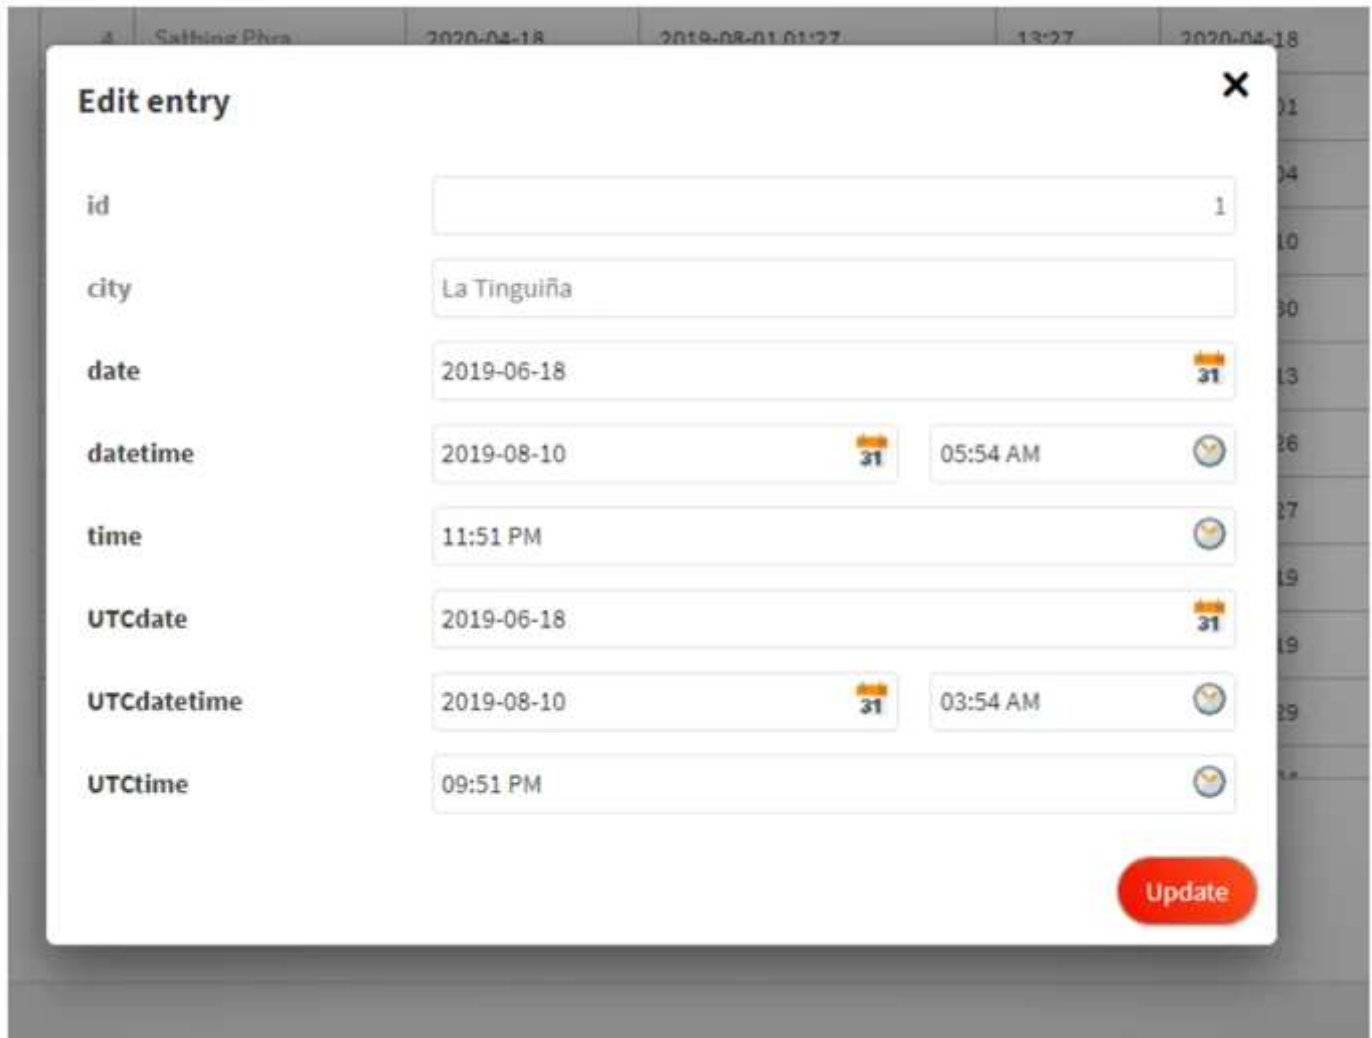

The value of a number field is validated during input. An invalid entry will be framed in a colored border and clicking out of the control during this state resets the content to its previous value.

Number ▲
test
2
3

Dates, Times and DateTimes

The various dates and times and their combinations are all displayed in a localized form, can be edited inline in the editable tables and are sorted by their internal ISO string.

In full row editing mode from the editable tables, each of the types gets a specialized control that is also available in inline editing mode.

The screenshot shows an 'Edit entry' dialog box with a close button (X) in the top right corner. The dialog contains several input fields for different data types:

- id**: A text input field with the value '1'.
- city**: A text input field with the value 'La Tinguiña'.
- date**: A date picker showing '2019-06-18' with a calendar icon and the number '31'.
- datetime**: A date and time picker showing '2019-08-10' with a calendar icon and '05:54 AM' with a clock icon.
- time**: A time picker showing '11:51 PM' with a clock icon.
- UTCdate**: A date picker showing '2019-06-18' with a calendar icon and the number '31'.
- UTCdatetime**: A date and time picker showing '2019-08-10' with a calendar icon and '03:54 AM' with a clock icon.
- UTCtime**: A time picker showing '09:51 PM' with a clock icon.

An orange 'Update' button is located at the bottom right of the dialog.

Attachments

Binding a column to an attachment field shows a list of all the attachments available in this field with an icon, filename and file size for each of them. This feature also carries over to the old selection table control.

The filename is clickable and opens the attachment in the browser (if supported) or starts a download of the file.

id ▲	Car Maker ▲	City ▲	Active ▲	Documents
1	Ford	Esperalvillo	<input type="checkbox"/>	<div>companies.csv (53 Bytes)</div> <div>EditableTableTest.fmex (10.01 KB)</div>

Edit
New
Delete

Opening a table row with an attachment column in full row editing mode in the editable table control gives users a popup form. This form displays a file input control like the ones that are already available in existing FireStart forms.

The file input control gives users the ability to download, upload and remove files from the bound attachment field.

Update

If the attachments are stored in a third party system like SharePoint instead of directly in the FireStart File DB, loading all the meta information can be really slow for longer lists. So in these cases, the attachment information is only loaded on demand.

ID ▲	Titel	Anlagen
1	Test Title Text 1234 !\$\$#	 Click here to load third-party attachments.
3	aweawetwa1Test Event112322zqwer 123123	 Click here to load third-party attachments.
17	Kontext BBBB	 Click here to load third-party attachments.
20	Final Test 123 ReviewTest	 Click here to load third-party attachments.
50	TestTest	 Click here to load third-party attachments.
53	gwgwwetwer	 Click here to load third-party attachments.
54	ez5u5u	 Click here to load third-party attachments.
55	asdf	 Click here to load third-party attachments.

 Edit  New  Delete

Users have to click in the table cell they want to reveal so that a loading mechanism starts that gets all the information needed from the third-party system to show a list of all the files in this attachment field. During the loading process a loading animation is shown in the cell and when finished the files are revealed.

ID ▲	Titel	Anlagen

3	aweawetwa1Test Event112322zqwer 123123	 Click here to load third-party attachments.
17	Kontext BBBB	 Click here to load third-party attachments.
20	Final Test 123 ReviewTest	 Click here to load third-party attachments.
50	TestTest	 Click here to load third-party attachments.
53	gwgwwetwer	 Click here to load third-party attachments.
54	ez5u5u	 Click here to load third-party attachments.
55	asdf	 Click here to load third-party attachments.

 Edit  New  Delete

This process does not take long for a single row but can be very slow if it would be done for all rows at the start, depending on the system it is bound to. In full row editing mode, the file input control shows the content of the attachment field from the start.

Formulas

Add an additional column and click on the **Edit formula** button.

This brings you to the “Formulas” tab of the property panel, where you can edit and create formulas that can be used in table controls to make calculated field columns. These columns display values are calculated based on other columns of the same business entity or the value of other controls, during runtime.
