Notification Activities

The following activities are used for sending information or notifications:

- Send Mail
- Send Meeting Request
- Send SMS

Send Mail

The SendMailActivity allows the automated sending of emails. You can choose whether the mail is sent via Exchange or SMTP. You can also request read and delivery receipts in the settings. It is also possible to define proxy servers. The body can be inserted either as normal text or as HTML.

Activity (Send Mail)
This activity is used to send rich text formatted mails to various recipients.
