Office Activities

The following activities let you handle specific actions in MS Word:

- Fill Word Template
- Word Update XML

Fill Word Template

This activity fills a special prepared Word document with data.

Aktivität (Fill Word Template)
 This activity can be used to fill fields from a Word template. The Word template must therefore be defined and adjusted in advance.

Activity Settings

Template document path
 c:\\temp\\Vorlage.docx

Load Fields

	Spalte		Wert		
+	Name		←Workflow-Variablen.WFVName→	Gebunden	✗
+	tb_Kunde_Straße		←Workflow-Variablen.WFVStrasse→	Gebunden	✗
+	tb_Kunde_PLZ		←Workflow-Variablen.WFVPLZ→	Gebunden	✗
+	tb_Kunde_Ort		←Workflow-Variablen.WFVOrt→	Gebunden	✗
+	tb_Kunde_Wert		←Workflow-Variablen.WFVWert→	Gebunden	✗

Output document path
 c:\\temp

Output document name template
 [%tb_Kunde_Straße%][%YMD%]

Output
 Output document name
 Workflow-Variablen.WFV_Ausgabepfad

Geschäftsobjekt-Felder Validieren OK Abbrechen

After providing a template, fields can be loaded from the template and will automatically be filled into the columns of the table.

How to create a word template

- enable 'Developer Tools' in Word

- add a form field of type 'Rich Text Content Control'
- enter the following text in the form field: **<Content Select=“./MyFieldName“/>**
(compared to the screenshot above: Name, tb_Kunde_Straße, tb_Kunde_PLZ, ...)

Parameters

Name	Usage	Description
Template document path	Required	File Path where the Template is, needs to be reachable from the server Consisting of WordTemplate field and the value with which it should be replaced.
Table Values		As the activity gets the values passed as text and splits by “;” ; is not supported in values
Output document path	Required	Directory where the Template is saved after replacing Values
Output document name templt	Required	Name of the generated Document Supported Placeholders: <ul style="list-style-type: none"> • [%YYYY%] CurrentYear (e. g. 2020) • [%MM%] CurrentMonth (e. g. 02 for February) • [%TT%] CurrentDay (e. g. 09) • [%YMD%] CurrentDate (e. g. 2020_02_22) • [%HMS%] CurrentTime (e. g. 05_13_02) • [%DATE [+ -nnn,][U,]FORMAT %] <ul style="list-style-type: none"> ◦ with + -nnn as offset multiple values are possible, separated with ' ' each offset needs to end with one of the following offset specifiers <ul style="list-style-type: none"> ▪ M: Months

- Y|J: Years
- W: Week
- T: Days
- U dateOption (e.g. +MO or -SA)
 - U, LOM: last day of month
 - FOM: first day of month
 - FOY: first day of year
 - LOY: last day of year
 - + next <WEEKDAY>
 - - previous <WEEKDAY>
 - with <WEEKDAY>
 - MO: Monday
 - DI, TU: Tuesday
 - MI, WE: Wednesday
 - DO, TH: Thursday
 - FR: Friday
 - SA: Saturday
 - SO, SU: Sunday
- format
 - default DateTime FormatString C#
 - wwISO: Week of year (ISO 8601)
 - ww: Week of year
- [%fieldPath%] replaced with the defined value with fieldpath being the same as appears in the column part of the table

Output
Document Name Name of the generated Document, including the path

Word Update XML

This activity updates a custom XML part in the input Word document passed as input via the input attachment field.

Activity (Word Update XML)
This activity updates a custom xml part in the word documents passed as input via the input attachment field.

Input

Input files:

Namespace:

Root element:

Element to replace:

New XML content:

Output

Output files:

Business Entity Fields Validate OK Cancel
